With competent team and up-to-date telecom solutions, AdoreInfotech has always remained a step forward in creating client friendly products and innovative solutions and always starved to keep abreast with the changing market scenario.

Adore IAX Solution

Adore Infotech believes in offering its customers with advanced technology solutions that incorporate the functionality with enhanced style and convenience in order to build up great business worldwide. Adore Infotech offers IAX Solution or Inter-Asterisk Exchange Protocol , is created for Asterisk for VoIP signaling , IAX were to minimize bandwidth used in media transmissions, with particular attention drawn to control and individual voice calls, and to provide native support for NAT (Network Address Translation) transparency. Another goal is to be easy to use behind firewalls. The basic structure of IAX is that it multiplexes signaling and multiple media streams over a single UDP (user datagram protocol) stream between two computers. IAX is a binary protocol, designed to reduce overhead especially in regard to voice streams. Bandwidth efficiency in some places is sacrificed in exchange for bandwidth efficiency for individual voice calls. One UDP stream is easier to setup for users that are behind a firewall. An additional benefit to having a single stream is the added security, which can be implemented very easily.

Features

- Caller ID & Card Number and IAX2 Friend authentication
- Customize the IVR rapidly, chose to play Balance, Time to call, Intro prompt, etc...
- Recording of all calls
- Speed-dial
- Free VoIP calls between application users

Adore IAX Solution Component

- IAX Softphone
- Asterisk
- Billing System
- Two day Remote Training Programme
- One month Remote support package

IAX Softphone

Adore IAX Softphone, which is the basic model IAX Softphone especially designed to give you a soothing communication experience for Asterisk for VoIP signalling. However it is mainly designed for control of IP voice calls. It strategically add the power of live voice communication to any PC-to-Phone, PC-to-PC and and to provide native support for NAT (Network Address Translation) transparency. Another goal is to be easy to use behind firewalls.

Asterisk

Asterisk does voice over IP in many protocols, and can interoperate with almost all standards-based telephony equipment using relatively inexpensive hardware.

Asterisk supports a wide range of TDM protocols for the handling and transmission of voice over traditional telephony interfaces. Asterisk supports US and European standard signaling types used in standard business phone systems, allowing it to bridge between next generation voice-data integrated networks and existing infrastructure. Asterisk not only supports traditional phone equipment, it enhances them with additional capabilities.

Asterisk provides a central switching core, with four APIs for modular loading of telephony applications, hardware interfaces, file format handling, and Codec's. It allows for transparent switching between all supported interfaces, allowing it to tie together a diverse mixture of telephony systems into a single switching network.

Billing System

To make your IAX System experience more convenient and useful, we bring a solution called Adore VOIP Billing. This is a modular web based real-time prepaid/ postpaid billing solution available with customer care and reporting system, which enable Internet Telephony providers to provide VoIP services.
